Project Proposal

Project Group Members: Yasin Yılmaz
                        Hayrettin Bahşi

Project Title
             Security weaknesses of IPsec Protocol

Project Description
    In this project, the main aim is analyzing the security issues of IPsec protocol. Known attacks against various versions of IPsec protocols will be described. Among these attacks, project group will focus on Initialization Vector Attacks and try to simulate these attacks in the real time environment.
